Practice Question

Using Docker Compose, write a docker-compose.yml file to deploy a WordPress application with a MySQL database using the images WordPress and MySQL. The configuration should include version, services, volumes, and networks, and define environment variables such as MYSQL_ROOT_PASSWORD, MYSQL_DATABASE, MYSQL_USER, and MYSQL_PASSWORD for the database service. Configure port mapping to access WordPress on port 8080 of the host, establish a persistent volume for database storage, and ensure service dependency ordering so that the WordPress service starts after the MySQL service.

```

  PRACQUES
  docker-compose.yml
  Run All Services
  Run Service
1  services:
2    db:
3      image: mysql:8
4      container_name: mydb
5      environment:
6        MYSQL_ROOT_PASSWORD: rootpassword
7        MYSQL_DATABASE: mydatabase
8        MYSQL_USER: myuser
9        MYSQL_PASSWORD: mypassword
10     ports:
11       - "3306:3306"
12     volumes:
13       - db_data:/var/lib/mysql
14     web:
15       image: wordpress
16       container_name: mywordpress
17       restart: always
18       depends_on:
19         - db
20       ports:
21         - "8080:80"
22       environment:
23         WORDPRESS_DB_HOST: db:3306
24         WORDPRESS_DB_USER: myuser
25         WORDPRESS_DB_PASSWORD: mypassword
26         WORDPRESS_DB_NAME: mydatabase
27       volumes:
28         - wordpress_data:/var/www/html
29     volumes:
30       db_data:
31       wordpress_data:
32
```
